4.

US OFFICIALS ONLY CONFIDENTIAL SECURITY INFORATION US OFFICIALS ONLY CONFIDENTIAL SECURITY INFORMATION

- 8. Every factory has stated in its plan the amount of time, money and material it may spend on repairs. These allocations are jealously hoarded for the repair of machinery that has a direct bearing on the fulfillment of the production plan. The remains fund is not sufficient to keep even the vital machinery in running order. Nothing is ever thoroughly overhauled; all repairs are but makesnifts to get production started again. How long the machine will stay running before another breakdown is not considered.
- 9. "The work pace in Latvian factories is either a slow-down because of lack of raw materials, defective machinery etc, or a mad rush to make up for lost time when the materials are delivered; the plans must be fulfilled in any case. Sarkanais Metalurgs usually manages somehow to fulfill its plan, but everybody says this is largely the doing of Manager Zvaigzne who is friendly with all sorts of planning men and knows all the tricks from his time in the USSR.
- 10. "Most of the production graphs featured in the newspapers are imaginative idealism. Nothing runs so smoothly in a Soviet-controlled plant. When there is no shortage of material, a machine will have broken down. The smooth curves in the graphs are at least for Sarksnais Metalorgs, so much propaganda.

  Labor
- 11. "Sarkanais Metalurgs has about 1200 workers. They are divided into seven categories with wages ranging from \$60 to 1000 rubles per month. An electrician in the Martin furnace department, for example, belongs to the second highest category; his wages (1951) averaged 900 rubles per month, fluctuating with the percentage of plan fulfillment and percentage of rejects produced. Although he has no fixed norms to meet since his job depends on current repairs, his wages fluctuated with the department's rate of achievement.
- 12. "The number of female workers at the plant is not large; a few hundred perhaps. The women that work paid, unskilled jobs. The lowest wages in the plant are earned by the women who carry the bricks for the furnaces. The female bricklayers earn a bit more, about 450 rubles a month.
- 13. "Until 1950 about 300-400 German POWs were working at Sarkanais Metalurgs, both as ordinary laborers and as specialists. The plant did not employ slave labor.

#### Plans, Norms and Incentives

- 14. "The length of a worker s day is fixed by law at eight hours. There is little legal overtime work for extra pay. In early 1951, for example, the Martin furnace department of Sarkanais Metalurgs had the right to let workers do paid overtime only four hours a week. There is, actually, a considerable amount of overtime work, the worker being credited with free time to draw on when the work is slack. At the end of each plant period there is a frightful rush to fill the plan; almost everybody will work overtime. At the start of a new plan period work is slack, and the workers get their free days. An electrical repair man for example, by virtue of his job, is not bound by norms or plans. But whenever anything breaks down in his department he may have to work two or three days or nights in succession without overtime compensation only the equivalent number of 'free' hours.
- 15. "The norms keep changing from one week to the next in Latvian industries. Sometimes a department will be told that its norm has been raised 50%, while other persons working in the same branch of industry will retain their old norms. The reason perhaps will be that the plan has provided for the delivery to the department of new machines producing a larger output. Though the arrival of the new machines may be delayed by non-fulfillment of plan in another factory, transportation difficulties etc, the

	XXX colt or	
	increased sutput expected from these machines will be incorporated in the departmen plan and have to be fulfilled on the old machines.	t's
	"When a person at Sarkanais Motalurgs exceeds his noun; he gets a salary increase been the extent of his achievement (double salary for a 200% production performance). But if he keeps this up for three months, his morn is increased, and that of other workers in his department. Although the Seviet press may write that a certain work has exceeded his norms to such an extent that he is now doing his work for 1960, this is pure propaganda. Nobody is allowed to overfulfill his norms to such an extent.	er B
	"For the workers at Sarkamais Metalurgs, Stakhamovism exists mainly on paper; it brinching to the worker except an hemorable mention, praise in the Seviet press and perhaps a red banner. Because it brings no material gain it is not seriously coveted there were no Stakhamovites in the Martin furnace department at Sarkamais Metalurgs	ings

21. "One more pressure technique to increase production involves a 'promise to Stalin', such as a primitive to complete a certain job of work by a certain date or to fulfil a plan before the time limit set. Such promises are entered into the same way as the Socialist competitions: a meeting is called; the workers are asked if anyone opposes the promise; nobody ever does so it is signed them and there. The workers get no more excited about these promises than about the competitions, for no material gain is attached. However considerable publicity attends them, and the management calls a meeting if a promise is not fulfilled in due time. Culprits who have 'retarded' fulfillment are ound among the lower employees. They are not punished, only blamed; a new date for fulfillment is set; and when the promise is at last fulfilled there is a new meeting at which special premia are awarded to certain CP and Komsomol workers not for work done but for 'organizing' fulfilment.

## Workers' Benefits

- 22. "Workers are entitled to a yearly holiday with pay. This pay is not based on their actual earnings but on the base daily wage of the category to which they belong, which usually is considerably less. Numerous small abuses arise in connection with holidays. Everybody is asked in the spring when he wants his holiday; he usually gets it though when it suits the management. Sometimes a worker may get no holiday at all, and no extra compensation; if it is in the interest of the factory to keep him at work. Carry-over of leave from one year to the next is rarely possible; a special certificate from the manager is needed.
- 23. "The much publicized rest houses and sanitoria for workers are virtually a fiction. If a factory has a 1000 workers, it may receive one or two journey orders for a sanitorium in the Crimea, or other resort area; such orders go to Party or Komsomol bosses. The workers spend their holidays at home. Few people in Liepaji go to the country as they did before World War II. The countryside is starving; there is more food in the towns. Some workers have small garden plots where they putter about; others just sit in the sum. Some take their holiday in single days, so as to transact the bureaucratic formalities of daily living.
- "Workers receive no benefits if they are injured at work. Under Soviet law there are no accidents at work , only carelessness. If an accident happens, either the worker himself or his superiors are to blame. Every worker entering a job is informed of the 'labor protection' devices governing that job. For example, an electrician is told that he may never work without rubber gloves and must 'beware of electric current' etc, for pages and pages. The rules are quite impossible to remember and follow completely: an electrician cannot work in rubber gloves and fulfil his norm, and even if he does follow all the rules and get an electric shock, he has neglected to 'beware of the current'. If the blame cannot be fixed on the worker in any way, then his immediate superior is guilty: Thus, if a worker has an assistant and the latter has an accident not caused by himself', the worker pays the assistant's hospital fees and other expenses; if the worker has no assistants and receives an injury his foremen pays for him. If it is actually proved that nobody but the management is guilty, and the injured worker has worked in the factory over eight years, he gets three months of hospital treatment free of charge plus his full pay. Accidents are treated like simple illnesses; the semefits are the same for both.
- 25. "It is not much use to take out accident insurance. The moment an insured person is involved in an accident, the insurance enterprise such him in court for having caused the accident himself. The worker only gets his insurance if he manages to win the case. This seldom happens. Kolkhoz cows, for example, are also insured. When one dies the attendant comman usually has to pay its price.

  Not in the case of the insurance of the manages of the attendant comman usually has to pay its price.

  Not insured person to win the court that the cow entrusted to him has not died through his own negligence.

- 26. "A person who is totally disabled by a work accident usually gets a small pension, depending on his wage category. Only if the accident was plainly the fault of the management does he get any more. At Sarkemais Metalurgs in 1950 a man who operated a machimefor cutting scrap iron for the charge of the Martin furnaces was killed when a granade exploded in the tank he was cutting. Manager Zwaigzne tried t persuade his wife not to sue, promising her good work. Others persuaded her to sue the plant. The court granted her a pension equal to her husband's wage.
  - 7. "The factory club is one of those 'voluntary-compulsory' institutions frequent in the USER. The workers have to contribute one percent of their wages towards its upkeep. At Sarkanais Metalurgs an effort seems to be made to keep the club as comfortable and attractive as possible, as it is the prims example in a factory of what the propagandists claim. Actually the clubs are avoided, except by young workers who go there to dance on Saturday nights. People have no time to sit around. When they are not working they have to scrounge the shops for foed. Club dues are collected at the same time as trade union dues, is not deducted on the payroll. Membership in a trade union is not compulsory, but is useful in case of illness. There are usually two trade union officials to represent 1000 workers. One of their duties is to hear workers' complaints, but there is no point to this because no improvements will result. Officially, for example, the workers and the management enter into a collective bargain which stipulates that wages will be paid on time. They never are, and though it is the plain duty of the trade union bosses to combet this abuse, the only thing they can do is run about and pacify or cow the workers into silence.

#### Political Indoctrination

28. "There is no regular political instruction for the workers at the larger Latvian factories. Occasionally a meeting is organised for the workers to make a promise to Stalin or to enter into a socialist competition. There are also mass meetings on May 1 and the anniversary of the October Revolution. The ordinary meetings are usually called between two shifts to get a large attendance. The management locks up the number plates of the outgoing shift so they wen't be able to leave the grounds; the workers have to produce such plates on exit. The meetings are short, so that precious production time will not be wasted. The authorities also find it hard to make the workers attend the parades on Communist holidays. The members of factory managements march to a man, as do the workers who are scared of reprisals. But nobody really gets punished for absence.

### Labor Discipline

29. "Labor discipline is strict according to law, but the actual enfercement depends considerably on the solidarity of the workers within a given factory. The first time one is late nothing such happens, the foreman just makes a row about 'endangering the plan'. If lateness occurs again, a 'commades' court tries the case. Such a court consists of three workers from the offender's department or factory, one of whom must be a CP member. To them the offender accounts for his lateness. If they consider the cause valid, the man is excused. If he is late a third time, and not cleaned by the 'commades' court', his case is turned over to the ordinary people's tribunal. Their sentence is usually three to five years of forced labor. It is sare for a case to go so far because there is a certain solidarity between the workers in a factory, anybody can be late, even the judges. No case is referred to the tribunal without first being tried in a 'commades' court'. Tribunal sentences are severe. For starting a brawl in a public place, or for drunk and disorderly behavior,

a mon gets one year of forced laber. Formerly the sentence for distilling bootleg liquer was one year, new it is five. A sentence of over two years must be served in the UBSR. At Sankanado Metalungs sobody served a work sentence at the factory on reduced wages, but at the Tesmus shippards in Liepaja persons working at reduced wages for periods of six months or a year.

no case of any Latvian technician or worker being sent to study in the want or even to make a trip there.

# General Attitudes

31. "The general spirit among the workers in a Soviet-controlled factory in Latvia is one of sullen but tacit discontent. Everybody knows that the norms only go en rising and that there is no kepe of improvement. The eld workers remarker the 'old times' but keep silent. The young have adopted a sert of devil-may-care fatalism: they drink a lot, try to laugh and have fun and never Entuk of the future. At 18 they are conscripted, which means three to five years away from home. On return, it will be the same hard work for little pay again. Everybody, young or old, feels in his heart that this cannot continue; and that there will have to be a war."
